REVIEWS

Built to withstand the rigors of stage and field use, the **C1030AC Cradle with base** and **C103AA Cradle Top** borrow the durable and solid clamp design from the Pearl AX Multi-clamp hardware. This road-tested clamp design offers a solid platform for mounting on either a tripod base, or directly onto an Endurance Field Frame rack and keeps the cradle arms securely in place.

The new Pearl Crash Cradle design is available in two formats, with and without a tripod base, to fit your economic and set-up needs. Both configurations have well-padded cradle arms to protect your cymbals, and provide a silent return to the stand in performance. cradle holds 2 cymbals at the ready for quick access. Rubber coated arms and bumpers assure silent use, and adjustable width arms provide security for different sized plates. Pearl quality single braced base is easy height adjustable and folds for easy transport.
