Efficiency made even more efficient.

Fast print processing, complex finishing options and increased simplification in the digitalisation process, these are just a few of the brilliant features that our A3 colour multifunctional systems possess. The 4008ci, 5008ci, 6008ci and 7008ci product family prints and copies at speeds of 40, 50, 60 and 70 A4 pages/minute in colour and b/w. The tiltable 10.1-inch (25.6cm) colour touch display will not only impress you with its elegant design, optimised menu navigation and intuitive operation, but also with its zoom function and enlarged LED displays, providing greater orientation on the system in next to no time.

What you can expect:

Timesaving: Capture individual documents, receipts or sales slips for travel expenses and report them quickly and easily with the integrated MultiCrop receipt scanning function. In just one step, it can digitally cut, straighten, and scan up to 16 receipts simultaneously and then store them separately as a file. A great relief, especially for small-format and non-standardised originals! For professional high-speed digitalisation, we recommend our Dual Scanner with ultrasonic sensors*, which can process up to 274 image pages per minute (300 dpi). The scanning unit not only detects and stops the scanning process when multiple originals are fed in, but also protects them at the same time thanks to its innovative staple detection.

Multi-layered: The systems not only process a wide range of paper weights (52-300 g/m^2) and formats (A6R-SRA3), but also offer extensive finishing options. The Job Separator provides a better overview thanks to the internal offset output*, where print jobs or other outputs are sorted to either offset to the left or right, making for easy removal. Various finishers with a stapling function* are available for professional paper management creating less manual work, and in combination with the brochure and/or Z-fold module, your business letters can be folded to fit the length envelope.

More climate-friendly: Thanks to the new toner technology, the toner melting temperature is significantly reduced, this means that the heating elements use less energy to implement the printing process. Low energy requirements mean fewer emissions, less energy consumption and, incidentally, protection of the climate and your wallet.

Play it safe: A standard feature of the system is that it can overwrite and delete print, scan, and copy data multiple times, as well as current encryption protocols such as TLS 1.3 allowing for secure data transmission on the Internet. The USB card readers* provide additional security by automatically verifying your identity on the multifunctional system using a contactless card or transponder.
